

EXPERIMENT – 02(b)

Experiment No.	02(b)
Date	_____
Title	Java Program to Read Marks of Five Subjects Through Command Line and Print Total and Average

1. Objective / Aim

To write a Java program that reads marks of five subjects through command line arguments and calculates the total and average marks.

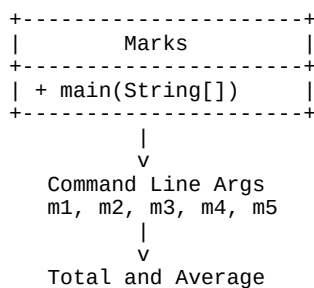

2. System Requirements

Hardware	Computer/Laptop with keyboard and monitor
Software	JDK (Java Development Kit), Command Prompt or any Java IDE

3. Algorithm / Logic Description

1. Start the program.
2. Read five subject marks using command line arguments args[0] to args[4].
3. Convert the command line arguments from String to int using Integer.parseInt().
4. Add all five marks to calculate the total.
5. Divide the total by 5.0 to calculate the average.
6. Display the total and average.
7. Stop the program.

4. UML Class Diagram

5. Source Code

```
class Marks {
    public static void main(String[] args) {

        int m1 = Integer.parseInt(args[0]);
        int m2 = Integer.parseInt(args[1]);
        int m3 = Integer.parseInt(args[2]);
        int m4 = Integer.parseInt(args[3]);
        int m5 = Integer.parseInt(args[4]);

        int total = m1 + m2 + m3 + m4 + m5;

        double average = total / 5.0;

        System.out.println("Total = " + total);
        System.out.println("Average = " + average);
    }
}
```

6. Compilation & Execution Commands

```
javac Marks.java
java Marks 80 75 90 85 70
```

7. Output Screen

Test Case 1

```
Command:
java Marks 80 75 90 85 70
```

```
Total = 400
Average = 80.0
```

Test Case 2

```
Command:
java Marks 95 88 92 90 85
```

```
Total = 450
Average = 90.0
```

Test Case 3

```
Command:
java Marks 60 65 70 55 75
```

```
Total = 325
Average = 65.0
```

Test Case 4

```
Command:
java Marks 100 100 95 90 98
```

```
Total = 483
Average = 96.6
```
